Abstract

Indeed, absolute and wholesome development and growth have been taken place in all types and categories of social, political and economical infrastructures, its impact and growth has been tremendous and big one in all developments path of the India's political administration and governance. To motivate and induce women's potential and positive energy ICT has been one of the significant and important element since its beginning time onwards, success, victory and development of the women's career and future have happened more and lot in academic and other professional fields, they were able to shine and shape their life styles in manifold ways and aspects due to help and advantages of the ICT. Unknown, puzzle and hidden thoughts women's career and life are unravelled and unveiled by the usage and application of the ICT, it plays very vital and marvellous role in terms of energising, imbibing and educating to women section in their day today life, they are able to accomplish and achieve all success in all administrative fields and break all hurdles in their day today life due to impact and great

advantages of the Information Communication technology. It reduces manpower and improves people's technology and soft skills to finish their work as early as possible without any hesitation and stuck. In this 21st century women 90% are seeming and looking with advantageous and smart in their computer and ICT knowledge which makes them so elegant and happier when they do their work successfully and neatly without any aberration and deviation. From school students to college going female people are possessing excellent and mammoth ICT knowledge and communication skills in terms of executing general work and their career growth, from sitting place itself women are able to do and perform all types of employment and educational work not wondering and roaming here and there because their acquired and adopted ICT skill and technique make them to vibrant and energetic women section in this challenging period. As equal to male people in every office and administration work women people are employed and hired to execute so many administrative works since they do possess smart and sound ICT knowledge, More than men people women are seen and perceived as a smart, speedy and quick work doer due to their speedy learning and developing ICT skill thereby in all administrative fields women are given much more preference by the management. Nowadays their skill and dynamic growth in all relevant fields are exceeded men's calibre and capacity toward accomplishing and administering so many executive works. The time and space which were dominated by the men people in all sections and office are vanished by replacing women section since

they are having admiring and gallantry skills in the ICT fields. The situation of women were kept at men's control and domination were totally changed owing to evolution and revolution of the ICT skill and technology which has made them to surpass and bypass men's talents and skills to do all types of work as equal to men and more than their energy.

Introduction

Unlike previous years ,women 's growth, progress, development and potentials have been strongly strengthened and fortified by their soft skill and information and communication technology skills ,which makes them to carry out all works in office, management and administration with positive look. This study manifest that women are so speedily developing and developed their career and life i all rudimentary fields due to their parent's educational motivation and advices because they are noting and can do nothing in their future and career unless they do get moral and motivational support from their parents. Every one woman have been getting value, respect and glory to their parent's hard work that they put for their career and life development from school days to college days, for which all women have to be responsible and dutiful to their parents without fail. For women's all types of success and growth in this challenging and competitive world their parents are being behind their success and growth ,without their help and

support their life would be at underdevelopment and backward social and economic situation. From all these discouraging names parents alone have lifted their life and put at meritorious career and social symbol. While every one of human being is liking to create and earn separate respectable social symbol ,women also included in this list as a first category to sustain and earn their respectable gender identity by acquiring and adopting soft and telecommunication skills to make proud and glory their life. From this study people may able to understand how far and what extent ICT has been improving and developing women's social, economical and political image is a core matter of this study ,form this writer would like to address and communicate that both women and ICT are being as an inseparable partner and elements in terms of creating wonder, surprising and progression in this existing social, political, economical and cultural fields.ICT is one of the developing and promoting tool and weapon of the women career at all aspect of career, family and personality development, its presence and essence in their education and occupation career have been encouraging and motivating them to feel so happier and stronger in the society.

Essence of ICT in Women life

Surely and certainly development will come to any one in many fold but it comes lot in all people career since they are operating and applying recent and contemporary Information Communication Technology. Its role and presence in all process of human being life

it seems to be more important in the women's career and personality development, because women's all in all progress, growth and development have been coming from the ICT resources. Especially their life status, education status and political participation have been developmental phenomena since they are learning and getting education about ICT. In today context women's profile and growth in academic, health, agricultural, space and research, nanotechnology, oceanology, geography, police, military, governance and administration have been proliferated and progressed due to impact and influence of ICT. Though constitution of India has tried lot to lift women's rights and life the ICT role has played vital and significant role toward empowering and uplifting their career and life. An ultimate development and progress has come in their life since ICT has brought several technological and communications advances and changes. Herby they are able to shine, make success and succeed in their life satisfactorily and happily. It fetches and gives all types of unseen and unachieved success, progress and development in the education, health, social, political and economical. In ancient and medieval time women's social, economical and political status were at meagre and unhappy situation, which was changed dramatically and absolutely in the contemporary era due to an effective introduction and induction of ICT. For instance women development spread and scattered in the divergent administration and corporate offices such as Front Office, Back Office, receptionist, military, Police, Cognizant, Accenture, Wipro, HCL, Ascends, Industry, Companies and other so many

centralised and state departments. Due to ICT knowledge women were able to acquire and attain all those aforementioned success.

Owing to ICT role in following fields women are shining:

Corporate Sectors

Management Fields

Industry

Companies

Education Institutions

Defence

Ocean Technology

Engineering fields

Automobiles fields

Garment Sectors

Public administration fields

Police Administration fields

Business Fields

Aeronautic fields

Space and Research

Since people are studying and comprehending ICT acumen through modern devices they are able to shine in those mentioned fields, able to make independent life, protect their defendant and neighboured. Very proudly and gloriously readers may understand that absolute and wholesome changes have come and occurred in their life after induction and introduction of ICT in the global administration.

Rural women's Situation in ICT's World Administration

Comprehensively and lengthily all people know that administration and ICT are linked and associated with each other in terms of executing ,performing and accomplishing managements and administrative tasks as easily as rapidly. With the help of ICT women were or are able to complete and finish their work easily though they have had personal talent and calibre. This calibre and knowledge in the ICT field is being gained and acquired by the second generation people who are going to college and school and research whereas first generation people are not possessing this ICT knowledge except knowing bookish knowledge, so people in the first generation have had knowledge in book alone rather than having or possessing in the ICT fields, those women who do have belong to house wife and superannuated being living in each and every house .Except those people rest of people having strong and sound acumen in the ICT field to equip and enrich their life. Women belong to first generation do not feel about getting knowledge in ICT since they became old aged and superannuated. On other hand

they worked lot to educate their children to get knowledge about ICT with an interest to liberate, make independent and strong their life in the present complicated, conflictive and competitive world. Women belong to first generation do not have sound knowledge in ICT and keep working sincerely to their sons and daughters bright future While second generations are shining in modern culture, advanced culture, luxurious life and liberal life.

Abrupt development has come in second generation women's education fields such as: Software ,Excel, Word, Computers programmes,application,editing,painting,communicating,conversing ,advertsing,propagating,canvassing,Graphics,animation,charting,multimedia and other computer oriented areas. All these areas are bringing wider knowledge to women people when they study that. They are able to get job opportunity easily without anymore delay and hesitation thereby they are able to live with decency, dignity and respect with full-fledged freedom and comfortable situation.

Conclusion

Comparing to those ancient and medieval period's women growth in social, economical ,political and telecommunication and technology fields ,in the contemporary periods women's growth and development in all those areas have been preceded and broken the record of men's growth in all fields. All those knowledge are derived by them due to great impact of modern day's education system, in which second generation people irrespective of poor and rich people are possessing sound and strong knowledge in the ICT fields ,which

makes them to conduct a dignified ,liberal and freedom life without being slavery to their opposite genders.

The time, space and era of men's domination over women have been vanished in the contemporary area since induction and introduction of ICT development. Indeed huge and plethora development and success having taken place in women's career due to India's sound education system and technology invention. Yet ICT needs to be propagated and introduced in each and every rural area with an interest to empower and uplift women's career in social, economical, political and other fundamnet aspects. After ICT was introduced in the global political and administrative system it has helped lot and more to bring women's career and life both economically and financially to the front place of the world administration. Before that they have been found as just women being responsible to male people in the family system without any improvement and progress .Really renaissance, rapture, happiness, pleasure, commitment, briskness, active mind and accountability and responsibility in women life purely and truly came even after birth of ICT. Now day's women's picture and image in the wider and big society is found enviable, splendid and dazzling owing their smart work and systematic education learning according to the world administrative and governance expectation. In their life in the contemporary years they feel so much happier and comfortable since they are earning and occupying important position in the various administrations. Their social status, economic status and life styles are changed and stood independently in their life

through their rigorous hard work. Owing to greater and stronger ICT role in all fields women were able to grow and develop their long cherished goal of becoming stronger, independent and self-sufficient community, for which their dream of continuous hard work to achieve their equal and equilibrium social, economical and politics. Through ICT's great impact and role in social changes in Indian Context women belong to second generation have been achieved glorious success and improvements in all vital fields than first generation people since they had living in non technology and advanced era.
